

Boomi Agentstudio

Design, govern, and orchestrate all AI agents at scale.

As businesses scale, uncontrolled app, data, and API sprawl often becomes a barrier to progress. The rise of AI agents promises big opportunities but also poses big problems. As the digital landscape grows more complex, leaders driving agentic AI innovation must strategically balance risk and reward.

Boomi Agentstudio is the only full agent lifecycle management solution that empowers organizations to simply design, govern, and orchestrate all AI agents at scale. This no-code technology gives developers the confidence and control to design agents capable of conquering any task. Leverage the latest AI integration standards with Model Context Protocol support, available across the Boomi platform. Every agent can be governed to stay compliant through centralized registration, whether homegrown, sourced from marketplaces, or delivered by consultancies, supported by built-in observability. With proven agent integration and MCP support, multi-agent teams can easily orchestrate frictionless business and accelerate workflows to move faster.

BENEFITS

Design agents with confidence and control

Simply design custom AI agents with memories to conquer any task for anyone and power them with trusted knowledge, data, and tools. Embed ethical guardrails in every AI agent, making responsible AI a priority.

Govern every agent to stay compliant

Centrally register AI agents from Boomi and beyond to proactively monitor them and control access to block security threats. Remain audit-ready with complete agent and provider activity logs.

Orchestrate frictionless business

Integrate AI agents into business processes to drive hyperproductivity and let them collaborate to deliver more impact. Accelerate agentic AI innovation with proven use cases.

The only full agent lifecycle management solution where AI autonomy meets responsibility

Unlock Hyperproductivity with AI Agent Templates
