Windows Admin Center

What are the Benefits? 👍

Visibility

An easy to use Interface, with unified Windows Admin Center and QCT system information in a single pane of glass dashboard, enhances the monitoring and managing experience on server health and system configuration.

Complementary

Driven by customer pain points around existing monitoring and management, QCT provides exclusive complementary features and functions to enhance the whole management experience, for example, disk mapping and FRU procedure.

Predictive Maintenance

Evaluate the system condition with S.M.A.R.T information and unhealthy notifications which allow organizations to take action before total failure occurs.

About Windows Admin Center

Windows Admin Center is a locally-deployed, browser-based management tool set developed by Microsoft. Users can use Windows Admin Center with valid licenses of Windows Server or Windows 10 at no additional cost.

QCT WAC Extension

QCT Management Suite, a tailor made QCT extension of Windows Admin Center, is designed to help users manage and monitor Windows Server hyper-converged and QCT system configuration information in a single pane of glass dashboard.
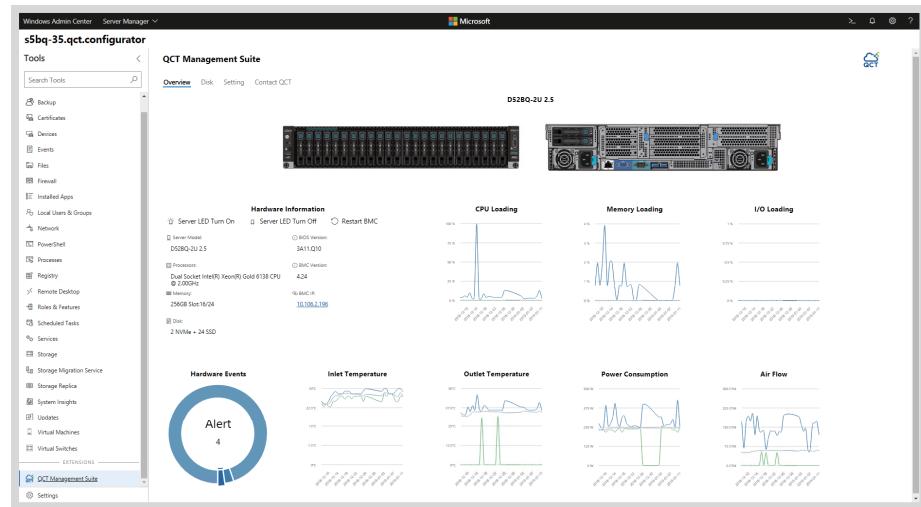

In the same environment of Windows Admin Center, IT administrators can have a simple and seamless experience managing and monitoring QCT servers and components, which includes an overview of system event logs, monitoring drivers, hardware component health for the processor, memory, fans, power supplies, temperatures, voltages, and an additional tool for RAID management.
